When Do People Start Collecting Social Security?

There's no "right" age to begin receiving Social Security retirement benefits. It's a personal decision based on multiple factors, including how long someone wants to work and how much retirement income is needed. Workers are entitled to full benefits at their full retirement age (FRA) — 66 to 67, depending on year of birth. Claiming before FRA (as early as age 62) will result in a permanently reduced benefit, while claiming later will result in a permanently increased benefit due to delayed retirement credits, which can be earned up to age 70.

It's Complicated: Inheriting IRAs and Retirement Plans

The SECURE Act of 2019 dramatically changed the rules governing how IRA and retirement plan assets are distributed to beneficiaries. The new rules, which took effect for account owner deaths occurring in 2020 or later, are an alphabet soup of complicated requirements that could result in big tax bills for many beneficiaries. *(The following is based on clarifying regulations proposed by the IRS in early 2022. As of this writing, final rules have not yet been released.)*

RMDs and RBDs

IRA owners and, in most cases, retirement plan participants must start taking annual required minimum distributions (RMDs) from their non-Roth accounts by April 1 following the year in which they reach RMD age (see table). This is known as their required beginning date (RBD).

Likewise, beneficiaries must take RMDs from inherited accounts (including, in most cases, Roth accounts). The timing and amount of an individual beneficiary's RMDs depend on several factors, including the relationship of the beneficiary to the original account owner and whether the original owner had reached the RBD.

Three key points apply to both owners and beneficiaries: (1) individuals must pay income taxes on the taxable portion of any distribution, (2) the larger the RMD, the higher the potential tax burden, and (3) failing to take the required amount generally results in an additional excise tax.¹

Date of birth	RMD age
Before July 1, 1949	70½
July 1, 1949, through 1950	72
1951 to 1959	73
1960 or later	75

The age that determines an account owner's RBD depends on the account owner's date of birth.

Spouse as sole beneficiary

Spouses who are sole beneficiaries have the most options for managing inherited accounts. By default, a surviving spouse beneficiary is treated as what's known as an eligible designated beneficiary (EDB) with certain advantages (see next section, "EDBs and DBs"). And if the deceased spouse died before the RBD, a surviving spouse EDB who is the sole owner can wait until the year the deceased would have reached RMD age to begin distributions.

Alternatively, a surviving spouse who is the sole owner can generally roll over the inherited account to their

own account or elect to be treated as the account owner (rather than as an EDB). In these cases, the rules for account owners would apply. However, there is a potential drawback to this move: if the surviving spouse is younger than 59½, a 10% early distribution penalty may apply to subsequent withdrawals unless an exception applies.

EDBs and DBs

The SECURE Act separated other individual beneficiaries into two groups: EDBs and designated beneficiaries (DBs). EDBs are spouses and minor children of the deceased, those who are not more than 10 years younger than the deceased, and disabled and chronically ill individuals. DBs are essentially everyone else, including adult children and grandchildren.

EDBs have certain advantages over DBs. If the account owner dies before the RBD, an EDB is able to spread distributions over their own life expectancy. If the account owner dies on or after the RBD, an EDB may spread distributions over either their own life expectancy or that of the original account owner, whichever is more beneficial.²

By contrast, DBs are required to liquidate inherited assets within 10 years, which could result in unanticipated and hefty tax bills. If the account owner dies before the RBD, the beneficiary can leave the account intact until year 10. If the owner dies on or after the RBD, a DB must generally take annual RMDs based on their own life expectancy in years one through nine, then liquidate the account in year 10.

Other considerations

Work-sponsored retirement plans are not required to offer all distribution options; for example, an EDB may be required to follow the 10-year rule. However, both EDBs and DBs may roll eligible retirement plan assets into an inherited IRA, which may offer more options for managing RMDs.

This is just a broad overview of the complicated new rules as they apply to individual beneficiaries. If an account has multiple designated beneficiaries, or if a beneficiary is an entity such as a trust, charity, or estate, other rules apply. Beneficiaries should seek the assistance of an estate-planning attorney before making any decisions.

1) The IRS has waived this tax as it applies to the DB 10-year rule through 2024.

2) An inherited account must be liquidated 10 years after an EDB dies or a minor child EDB reaches age 21.

Thinking of Selling Your Home? Don't Be Surprised by Capital Gains Taxes

The Taxpayer Relief Act of 1997 provided homeowners who sell their principal residence an exclusion from capital gains taxes of \$250,000 for single filers and \$500,000 for joint filers. At that time, the average price of a new home was about \$145,000, so this exclusion seemed generous and allowed more Americans to move freely from one home to another.¹ Unfortunately, the exclusion was not indexed to inflation, and what seemed generous in 1997 can be restrictive in 2024.

Capital gains taxes apply to the profit from selling a home, so they may be of special concern — and potential surprise — for older homeowners who bought their homes many years ago and might yield well over \$500,000 in profits if they sell. In some areas of the country, a home bought for \$100,000 in the 1980s could sell for \$1 million or more today.² At a federal tax rate of 15% or 20% (depending on income) plus state taxes in some states, capital gains taxes can take a big bite out of profits when selling a home. Fortunately, there are some things you can do to help reduce the taxes.

Qualifying for exclusion

In order to qualify for the full exclusion, you or your spouse must own the home for at least two years during the five-year period prior to the home sale. You AND your spouse (if filing jointly) must live in the home for at least two years during the same period. The exclusion can only be claimed once every two years. There are a number of exceptions, including rules related to divorce, death, and military service. If you do not qualify for the full exclusion, you may qualify for a partial exclusion if the main reason for the home sale was a change in workplace location, a health issue, or an unforeseeable event.

Increasing basis for lower taxes

The capital gain (or loss) in selling a home is determined through a two-part calculation. First, the selling price is reduced by direct selling costs, including certain fees and closing costs, real estate commissions, and certain costs that the seller pays for the buyer. (The amount of any mortgage pay-off is not relevant for determining capital gains.) This yields the *amount realized*, which is then reduced by the *adjusted basis*.

The basis of your home is the amount you paid for it, including certain costs related to the purchase, plus the costs of improvements that are still part of your home at the date of sale. In general, qualified improvements include new construction or remodeling, such as a room addition or major kitchen remodel, as well as repair-type work that is done as part of a larger project. For example, replacing a broken window would not increase your basis, but replacing the window as part of a project that includes replacing all

windows in your house would be eligible. This basis is adjusted by adding certain payments, deductions, and credits such as tax deductions and insurance payments for casualty losses, tax credits for energy improvements, and depreciation for business use of the home. (See hypothetical example.)

Hypothetical Example

Pete and Joanne purchased their home for \$100,000 in 1985 and sold it for \$800,000 in 2024. This is how their capital gains might be calculated.

Capital gains	Basis
\$800,000 sales price	\$100,000 purchase price
– \$50,000 direct selling costs	+ \$8,000 purchase costs
\$750,000 amount realized	+ \$52,000 improvements
– \$150,000 adjusted basis	\$160,000 total basis
\$600,000 capital gain	– \$10,000 solar energy credit
– \$500,000 capital gains exclusion	\$150,000 adjusted basis
\$100,000 taxable gains	

At a 15% rate — which applies to most taxpayers — this would cost \$15,000 in federal capital gains taxes.

This hypothetical example of mathematical principles is for illustration purposes only. Actual results will vary.

Inheriting a home

Upon the death of a homeowner, the basis of the home is *stepped up* (increased) to the value at the time of death, which means that the heirs will only be liable for future gains. In community property states, this usually also applies to a surviving spouse. In other states, the basis for the surviving spouse is typically increased by half the value at the time of death (i.e., the value of the deceased spouse's share).

Determining the capital gain on a home sale is complex, so be sure to consult your tax professional. For more information, see IRS Publication 523 *Selling Your Home*.

Do You Need to Pay Estimated Tax?

Taxpayers are required to pay most of their tax obligation during the year by having tax withheld from their paychecks or pension payments, or by making estimated tax payments. Estimated tax is the primary method used to pay tax on income that isn't subject to withholding. This typically includes income from self-employment, interest, dividends, and gain from the sale of assets. Estimated tax is used to pay both income tax and self-employment tax, as well as other taxes reported on your income tax return.

Generally, you must pay federal estimated tax for the current year if: (1) you expect to owe at least \$1,000 in tax for the current year, and (2) you expect your tax withholding and refundable tax credits to be less than the smaller of (a) 90% of the tax on your tax return for the current year, or (b) 100% of the tax on your tax return for the previous year (your tax return for the previous year must cover 12 months).

There are special rules for farmers, fishermen, and certain high-income taxpayers. If at least two-thirds of your gross income is from farming or fishing, you can substitute 66.67% for 90% in general rule (2)(a) above. If your adjusted gross income for the previous year was more than \$150,000 (\$75,000 if you were married and filed a separate return for that year), you must substitute 110% for 100% in general rule (2)(b) above.

Withholding and estimated tax payments may also be required for state and local taxes.

If all of your income is subject to withholding, you probably don't need to pay estimated tax. If you have taxes withheld by an employer, you may be able to avoid having to make estimated tax payments, even on your nonwage income, by increasing the amount withheld from your paycheck.

You can use Form 1040-ES and its worksheets to figure your estimated tax. They can help you determine the amount you should pay for the year through withholding and estimated tax payments to avoid paying a penalty. The year is divided into four payment periods. After you have determined your total estimated tax for the year, you then determine how much you should pay by the due date of each payment period to avoid a penalty for that period. If you don't pay enough during any payment period, you may owe a penalty even if you are due a refund when you file your tax return.
